

AWA Auto Mall

Week 2 Progress Update

Reporting period	Overall status	Live site
Sep 22 – 28, 2026	Ahead of schedule	awaautos.com

Week 2 focused on the core marketplace experience — catalog browsing, filters, product detail pages, and search with autosuggest. On top of that, the site has also started ranking well organically. Here's what's live now and what's already in motion behind the scenes.

Live on the site now

- ✓ Full car catalog with working filters — by brand, model, type, condition, price, and more
- ✓ Dedicated Browse pages for every Brand, Model, and Type, with clean breadcrumb navigation between them
- ✓ Vehicle detail pages refined into a proper marketplace layout for every listing
- ✓ Live search with autosuggest, so buyers find a vehicle in a few keystrokes
- ✓ Compare and Favorites carried over and working smoothly alongside the new browsing pages
- ✓ **awaautos.com is now the top organic Google result** for “AWA Auto Mall” searches, ahead of other regional AWA-named businesses

Working behind the scenes

- ✓ Admin dashboard rebuilt on a cleaner, authenticated shell across every module — vehicles, orders, content, inquiries, analytics, and settings
- ✓ The live backend API (api.awaautos.com) is being wired in now: catalog, login, and vehicle endpoints are coded and ready to switch on the moment the database goes live
- ✓ AI chat widget and the installable app (PWA) experience are getting a further pass this week

Coming up next week

- ✓ WhatsApp “Request a Quote” with vehicle details pre-filled
- ✓ Compare feature polish for a smoother side-by-side experience
- ✓ Floating WhatsApp, contact, and Maps quick-access buttons site-wide

As always, reach out any time with questions — we'll send the next update Sunday.
